

FARONICS

ANTI-EXECUTABLE™ STANDARD

ABSOLUTE PROTECTION FROM UNAUTHORIZED EXECUTABLES

■ FARONICS INTRODUCES A NEW DIMENSION OF PROTECTION!

In today's computing environments, IT professionals face the daunting task of keeping expensive computing resources free from illegal software, unauthorized downloads, and other malicious intrusions. Faronics Anti-Executable provides the solution to these pervasive and escalating problems.

Faronics Anti-Executable offers a revolutionary method to address blended threats. Using its unique whitelist technology, Anti-Executable provides proactive protection against spyware, keyloggers, trojans, viruses, or any other type of malware. Faronics Anti-Executable also prevents unauthorized executables from launching, whether they are downloaded from the Internet or introduced via any removable media.

On install, Anti-Executable performs a deep scan of the computer and authorizes every single executable on it. From that point on, any other executable is deemed unauthorized and will not run or install.

Powerful and secure, Anti-Executable is an economical software solution that offers protection and security for all multi-user computing environments.

Anti-Executable detects

100% of executable file types and prevents them from running, including:

.exe	.ocx	.ax
.sys	.drv	.x32
.vxd	.scr	.tlb

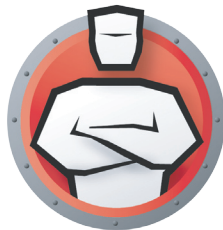

and many many more

For Windows® 95 · 98 · Me · 2000 · XP

the unknown threats
of tomorrow**

ANTI-EXECUTABLE STANDARD

❖ Increase Productivity

Prevent users from wasting valuable time and bandwidth using peer-to-peer software, instant messaging, or games. With Anti-Executable installed, users cannot run unauthorized software from CD-ROMs, floppies, local or wide area networks, e-mail attachments, or the Internet. However, users can access documents, visit Web sites, and work normally with authorized programs and files. Anti-Executable supports all network, policy, and server settings. Exempting network paths gives users access to applications located on secure file servers or other peripheral devices.

❖ Enforce Acceptable Use Policies

Anti-Executable enforces Acceptable Use Policies by ensuring that only authorized programs operate. A customizable message notifies the user of each unauthorized action to deter future misuse.

❖ Prevent Identity Theft

Identity theft techniques that make use of keyloggers and other dangerous programs are eliminated. Anti-Executable prevents viruses, root kits, and trojans containing keyloggers or other malicious spyware from ever installing or running.

❖ Stop Viruses

Anti-Executable prevents yesterday's, today's, and tomorrow's executable viruses from ever running.

❖ Block Illegal Software Use

Anti-Executable becomes a de facto license manager. Creative users may try to conceal or rename program files, but these tactics prove futile with Anti-Executable running. Only authorized programs are allowed to execute. Copy and delete prevention assures authorized programs are not pirated, moved, or deleted.

❖ Save Support Time

System administrators can instantly deploy Anti-Executable across a network using the Silent Install system or existing imaging solutions. Anti-Executable minimizes or completely eliminates the need to send out patches, fixes, or technicians to undo damage caused by rogue software.

Did you know?

On average

80%

of all home computers are infected by spyware

88%

of all PC users do not run up-to-date antivirus software

source:
National Cyber Security Alliance and America Online™ survey, 2004

Did you know?

On average, it takes

20

minutes for an unprotected PC to become infected by a worm after connecting to the internet
